RESEARCH INTERESTS

My research program focuses on mental and physical health disparities that affect racial, ethnic, sexual, and gender minorities. Currently, I am: (1) developing and testing digital health interventions to address the mental health needs of and increase engagement in health care and treatment for marginalized populations (e.g., Black sexual-minority men living with HIV) and (2) using quantitative modeling and qualitative inquiry to investigate frameworks for understanding the effects of psychological distress, stigma, and other individual, social, and structural determinants on the mental and physical health of marginalized populations.
